DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-4, drawn to a substantially pure TIAP polypeptide, classified in class 530, subclass 350.
- II. Claims 5-8, drawn to a method of identifying compounds that modulates TIAP biological activity, classified in class 435, subclass 7.1.
- III. Claims 9-14, drawn to a vector comprising nucleic acid molecule encoding a TIAP polypeptide, classified in class 435, subclass 320.1.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and III are distinct. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case a purified TIAP polypeptide of group I is structurally and functionally distinct from the expression vector of group III. In addition, polypeptides are the biological active agents where as the expression vector requires the cellular micro-environment to express the encoded protein. Thus, these inventions are mutually exclusive and are of separate uses.

Inventions I and II are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case the TIAP polypeptide of group I can also be used to make antibodies by injecting the TIAP polypeptide into a host animal. The method of group II can also

Art Unit: 1636

be practiced using a naturally occurring animal cell that express TIAP polypeptide. Thus, these inventions are mutually exclusive and are of separate uses.

Inventions II and III are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case even though the expression vector of group III can be used to make recombinant cells, the method of group II can be practiced using a naturally occurring animal cell that express TIAP polypeptide or TIAP polypeptide immobilized on solid support. Thus, these inventions are mutually exclusive and are of separate uses

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
